

ABSTRACT

Apparatus for restraining an infant during diaper
changing and for providing a protective barrier for the
5 changing surface and/or diaper changer. More particularly,
apparatus having an adjustable, quick-release strap system
for restraining the upper torso (e.g. shoulders) of an
infant during a diaper changing operation which preferably
includes a padded fabric outer layer which houses a
10 foldable insert barrier layer (for ease of storage or
transport) which can be removed for ease of cleaning.
